

Tenzing Security Testing

With an average cost of over \$200 per compromised record, security breaches are expensive for any company. Beyond the direct financial implications, the damage to a brand's reputation is far reaching and often irreparable. Recent high profile security breaches mean this is truer than ever for retailers, who are facing a public that is wary about the security of their personal and financial information.

In this environment, traditional reactive security methods are no longer enough. Merchants cannot afford to repair a damaged reputation, a more mature approach is necessary. Instead of reacting to security incidents, retailers need to look for proactive options, solutions that prevent security attacks rather than minimize their impact.

One such way is to conduct regular security tests to identify vulnerabilities before hackers do. Tenzing's Security Testing Suite can help retailers mitigate security risks with services that range from basic external scans to in-depth penetration testing.

Benefits

In Depth, Expert Analysis

Tenzing's team of 'ethical hackers' are armed with the same tools, techniques and expertise as the world's most advanced cyber criminals. They will identify the same security gaps in your web store that criminals might use to gain access to valuable customer data. This gives you the opportunity to close those gaps before they are discovered and exploited.

Flexible Options

A range of scanning and testing options are available to meet individual customer needs. Tenzing can provide ASV vulnerability scans, vulnerability assessments, with in depth descriptions of vulnerabilities, or advanced tests that simulate more sophisticated attacks on your site, complete with exploitation attempts. Testing can be recurrent, or one time only.

Compliance Readiness

Tenzing's Threat Assessment Services ensure that your security and compliance objectives are met with the appropriate level of verification/validation for your environment. This includes the quarterly vulnerability scans required for PCI DSS compliance.

Complete Control

You are in complete control of when and how your tests are deployed. Simply reach out to the Tenzing security team, and we'll schedule and deploy your tests whenever is most convenient to you.

Features

Our team of experts will search for and identify vulnerabilities in your application and network, with or without attempting penetration. Vulnerability reports provide you with a comprehensive assessment of the security of your web store, as well as evidence for your security and compliance objectives. Our team will review the report with you and provide recommendations on how to close any security gaps that are identified across your Network, Application, OS, Infrastructure and other systems.

SERVICE OPTIONS

	Vulnerability Scan	Vulnerability Assessment	Penetration Testing
Infrastructure Scan			
Web Application Scan			
Deep Application Analysis			
Web Services Analysis			
Risk Reconnaissance			
Business Logic Analysis			
PCI/NIST SP800-115 Compliant Methodology			
OWASP Testing Guide Compliant Methodology			
Simulated Attacker			
Exploitation			

About Tenzing

Founded in 1998, Tenzing delivers more than scalable infrastructure, fast networks and great managed services. Tenzing combines deep commerce platform expertise, advanced managed services, and extensive industry partnerships to help merchants increase revenues and deliver remarkable customer experiences. Retailers, Brand Manufacturers, SIs and ISVs choose Tenzing for their specialization in impactful technologies, operational delivery of services, and industry insights. Tenzing is SSAE16 Type II, ISO 27001, PCI-DSS and VISA PCI certified with datacenters in the US, Canada and United Kingdom.

Contact us today if you would like to discuss Security Testing for your business.
